

Making zero waste a reality

How Supply Cycle thinking
is transforming recycling

The Power of Less®

The power of less

Less bins, more value

There is a lot of talk about zero waste. Through perpetual devotion to this ambitious goal DS Smith is the only provider who can actually deliver it. We do this by applying the principles of the waste hierarchy, setting clearly defined objectives and creating innovative new opportunities to reduce, reuse, recycle and recover material.

Using what we call the power of less, our customers can become more efficient through less waste, less environmental impact, less consumption and less cost. And because we help you waste less, you pay for less bin collections.

Our pledge means diverting more from landfill, recycling less reusable material, producing green energy and reducing emissions. In short it's about having a deep understanding of the waste hierarchy and how to manage it.

Drawing on the unique capabilities of the wider DS Smith group we are trusted to deliver environmental responsibility and financial benefits by organisations of all sizes across Europe.

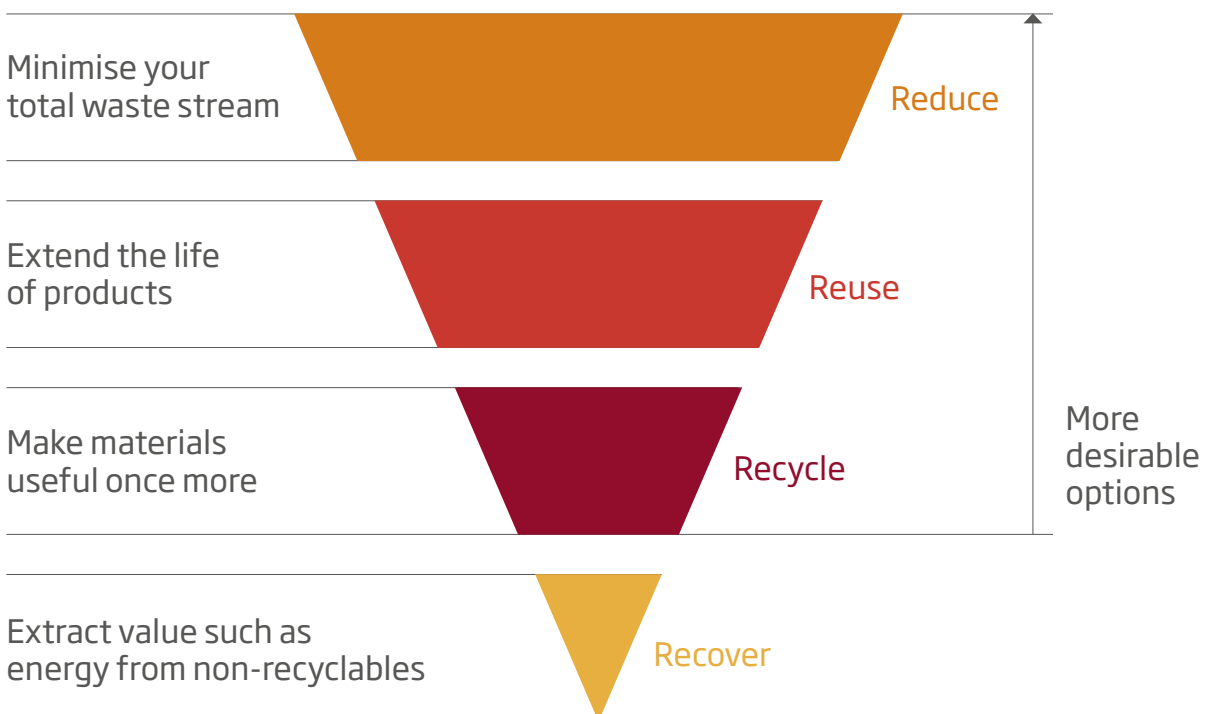

Zero waste:
100% of resources back
into something useful
once more

Salvaging value

Top down waste prioritisation

Our ethical approach is to consider options at the top of the waste hierarchy first, helping you reduce waste and reuse materials before looking at recycling opportunities. We are passionate about following these principles to help you continually improve and achieve the best environmental and economic solution.

Value and the waste hierarchy

Making more materials useful

Putting reusable resources through the mill

DS Smith is a recycling and waste management company that's perpetually devoted to closing the loop on recycling. As the largest recycling company in Europe, we are specialists in paper, recovering 5.4 million tonnes every year to supply our own network of UK & European paper mills as well as 3rd party paper mills globally. Not only are we specialists in the supply of all Paper Grades, we are also involved in several material trading marketplaces, including Plastics, Metals and Glass.

Our commitment to zero waste and setting ethical standards has seen our capabilities grow into new and unique categories that focus on best environmental practice. Check the list on this page to find out what you could recycle in your quest for zero waste.

Closed loop recycling

Perpetually reducing waste

We're perpetually devoted to closing the loop on recycling. This means zero waste and a commitment to making all disposed materials into something useful once more.

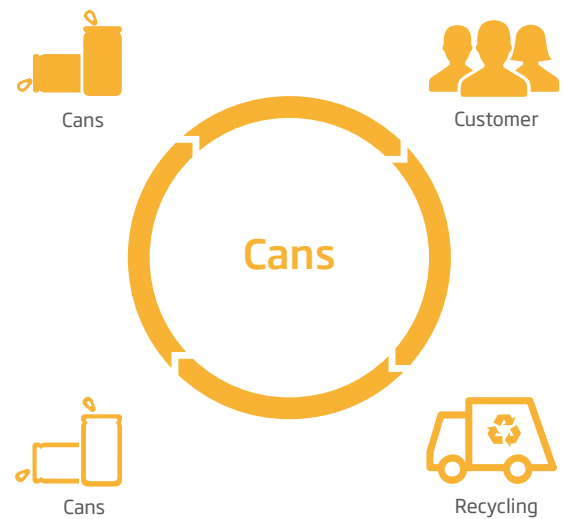

Our closed loop solutions are backed by Supply Cycle thinking. This allows us to operate at the top of the waste hierarchy.

As an integrated business with expertise in the design, supply, recycling and resupply of packaging, we are able to keep entire processes under our control, ensuring a totally safe, reliable and sustainable service.

In this way we are able to help our customers reuse the same material again and again, dramatically cutting both waste and consumption, keeping them at the top of the waste hierarchy. Ultimately this delivers reduced costs and enhanced environmental credentials for your organisation.

What is supply cycle thinking?

Rather than putting materials through a supply chain, where they are used once and disposed of at the end of their lifetime, we reduce waste, cost and environmental impact by putting materials through a repeated cycle of use.

Quality

Less contamination
needs more devotion

Quality is at the heart of everything we do. That goes without saying. But it's our perpetual devotion to helping our customers do more with less in an ethical, high-quality way that sets DS Smith apart.

Helping you achieve more with less environmental impact is the reason for our being. We are passionate about minimising waste whilst maximising recyclability rates and minimising the cost and inconvenience of waste management in the workplace. What's more, we believe in Supply Cycle thinking: the concept that waste is a catalyst for innovation and where there's a use, there's a way.

Customer care

A little devotion goes a long way

You can trust our customer support and account management teams to go the extra mile to help you achieve your waste management goals.

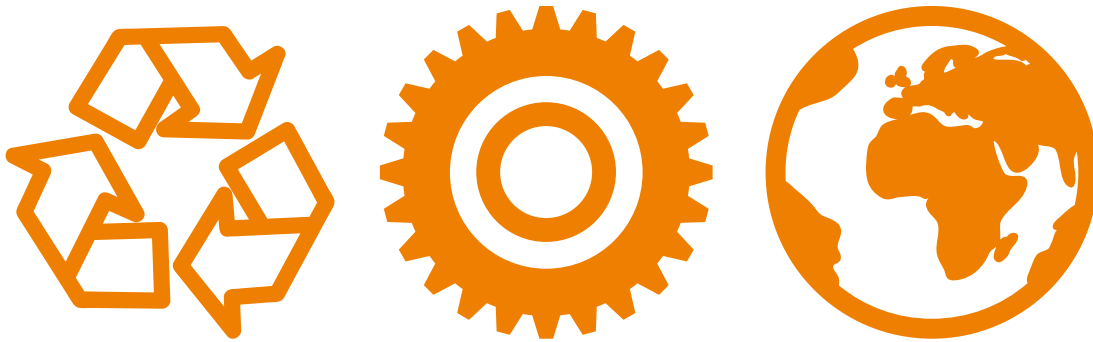

Acting as an extended member of your team, your Account Manager will:

Evaluate your entire supply and waste network

Maximise revenue from recycling, running lean on recovery and disposal services

Ensure on-the-ground staff share this vision through training and appropriate incentives

Perpetual devotion to accuracy and quality is one of the most powerful ingredients in our recipe for zero waste success. When you partner with us our people will help you share in this ethos.

Let's get started

Everything you need.
Right here, right now

From the humble polythene bag to large scale compactor bins, DS Smith supply all the equipment you need to implement waste management strategies on any scale.

Office Recycling Bins

Our appropriately sized, attractively branded office recycling bins make it as easy as possible for staff to engage in recycling at your workplace.

Available for the following materials:

Paper

Security shredding

Drinks cans/food tins

Plastic bottles/food trays

Mixed dry recycling

Polythene Recycling Bags

Used for mixed dry recycling collections and for our range of internal office bins.

Wheeled Bins

This versatile range of containers has been specifically designed with space and flexibility in mind. With fixed wheels and lockable lids, they can be easily wheeled around your site providing easy access to and from waste generation areas. Available from 120 to 1100 litres.

Skips

Skips and roll on/off bins are used by both our large and small waste producing customers who require the disposal of heavy and bulky building and demolition waste.

Rear End Loader (REL) / Front End Loader (FEL)

REL/FEL collection containers are steel bins, with easy to use lids and the option to include locks. These containers are designed for slightly larger material capacity than our wheeled range, which means fewer collections, resulting in lower costs to your sites. Available from 6.1 to 12.2 cubic metres (8 to 16 cubic yards).

Exchange Containers

This range is aimed at sites that generate greater volumes of material, and have the space to accommodate larger containers. The exchange container is left on site and replaced with a new one when full. These containers can be supplied enclosed or open topped and typically can be delivered in a range of sizes from 22.1 to 30.5 cubic metres (30 to 40 cubic yards).

Compactor Containers

Many sites generate material that outstrips even the largest of containers. DS Smith supplies a range of compactor bins, typically from 22.1 to 30.5 cubic metres (30 to 40 yards) although other sizes are available. Compactor bins can compact material up to a ratio of 4:1 making valuable space and transport savings, which will result in cash and carbon benefits for your organisation.

On-Site Processing Equipment

We supply small through to large scale on-site processing equipment including balers and compactors to seamlessly complement our collection service.
